Herbert Guðmundsson TicTacToe administration manual

In this manual you'll find instructions on how to install the TicTacToe game made by the group Herbert Guðmundsson.

What you'll need for this installation on a fresh machine is:

- Git
- Gradle
- Java SDK 8
- Spark
- Travis

Clone the repository from github:

- *git clone https://github.com/HerbertGudmundsson/late-term_assignment.git*

Compile the project:

Inside the root of the project run the compile script.

- *bin/compile*

You can run the deploy script and test your changes by running the *deploy* script:

- bin/deploy

This script will build, package, unit test, style check and run the build. A jar file will be created under */tmp/late-term_assignment/* . You can run this jar file with the following command:
- *java -jar late-term_assignment-all.jar*

- You can access the application with browser at *http://localhost:4567* after you run it.

Commit your changes to your branch and create a pull request for it to be merged with the master branch.

- Travis-CI will build the project, the status of the progress can both be monitored at https://github.com/HerbertGudmundsson/late-term_assignment and https://travis-ci.org/HerbertGudmundsson/late-term_assignment
- Broken builds will result in closed pull request.
